Lighttpd + PHP Session Problem

I am swithcing from apache+php+mysql to lighttpd+php+mysql on one of my VPS and the new setup of lighttpd+apache+mysql was unable to keep php session.

I think it is because permission problem, so I check the owner of php. Yes, the owner is still apache.

Here the shell command which I use to fix it (login with root access):

```
#chown -R root:lighttpd /var/lib/php/
```

Note: My PHP was installed on /var/lib/php/
