## Free DNS Hosting Providers

There are many DNS hosting providers on the NET which will give you free service for absolutely no cost.

Free DNS hosting services are useful if you:

- Need secondary DNS servers.
- Need MX records for a virtual domain.
- Want control over your DNS records: change DNS frequently, changing ISPs soon.
- Can't get free service from an ISP and don't want to do it yourself.
- Are inside of a firewall and need publicly-accessible name servers outside of your firewall.
- Need name servers that are closer to your backbone location.

Providing additional secondary servers can greatly improve the reliability and accessibility of your domain. If your primary DNS becomes unavailable due to network problems, your secondary DNS entries come into play, so the more DNS servers you have, the greater the resilience to errors.

Here some free DNS hosting providers which will give you their free services:

- [FreeDNS.affraid.org](http://FreeDNS.affraid.org)
- [GraniteCanyon](http://GraniteCanyon)
- [EveryDNS](http://EveryDNS)
- [MyDomain](http://MyDomain)
- [Zone Edit](http://Zone Edit)
- [Twisted4Live](http://Twisted4Live)
- [VCS Web](http://VCS Web)
- [XName](http://XName)

I will add some more later.
